Switch the mains supply and check the green LED is on (take care not to look directly at the High Brightness LED head as this could result damage to the eyes). The green LED indicator is located on the front surface of the LED lamp. The LED indicates the mains supply is healthy and the battery is charging, this LED should always be illuminated if the mains supply is on.

Warnings:

1. Make sure that the product is installed properly before connecting to electricity.
2. Do not cover the fitting.
3. Maintenance and installation should only be carried out by a professional electrician.
